The Switching Observer

Laquitaine & Gardner found evidence for the “Switching Observer” (dataset 3).

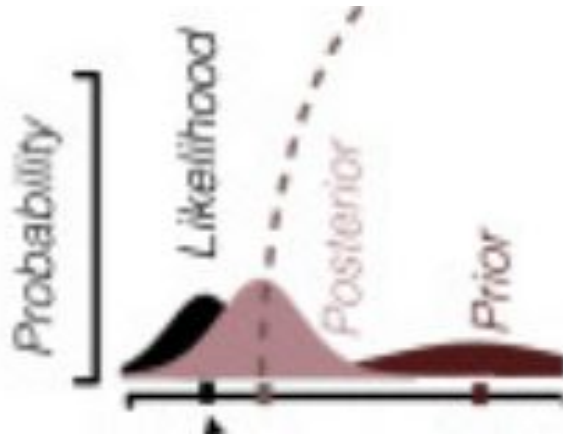

Laquitaine & Gardner 2017

Bayesian Observer

Switching Observer

We were wondering why this switch exists. One limitation the paper had is that it doesn't examine reaction time.

The Switching Observer

We hypothesized that this switch process could be modelled by a **Drift-Diffusion model**, which may tell us about a relationship between this switch and the reaction time.

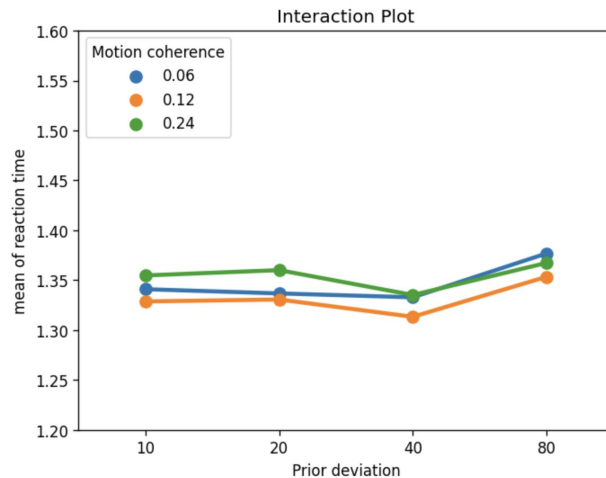

(Mikkel C Vinding et al.)

Reaction Time in the dataset

In the data, we examined:

- Reaction Time v.s. Motion Coherence
- Reaction Time v.s Standard deviation
- Reaction time wrt prior-likelihood proximity to estimation
- Reaction time wrt start-angle proximity to estimation
- Reaction time wrt start-angle proximity to prior/likelihood

The Drift Diffusion Model (DDM)

Speed-accuracy tradeoff

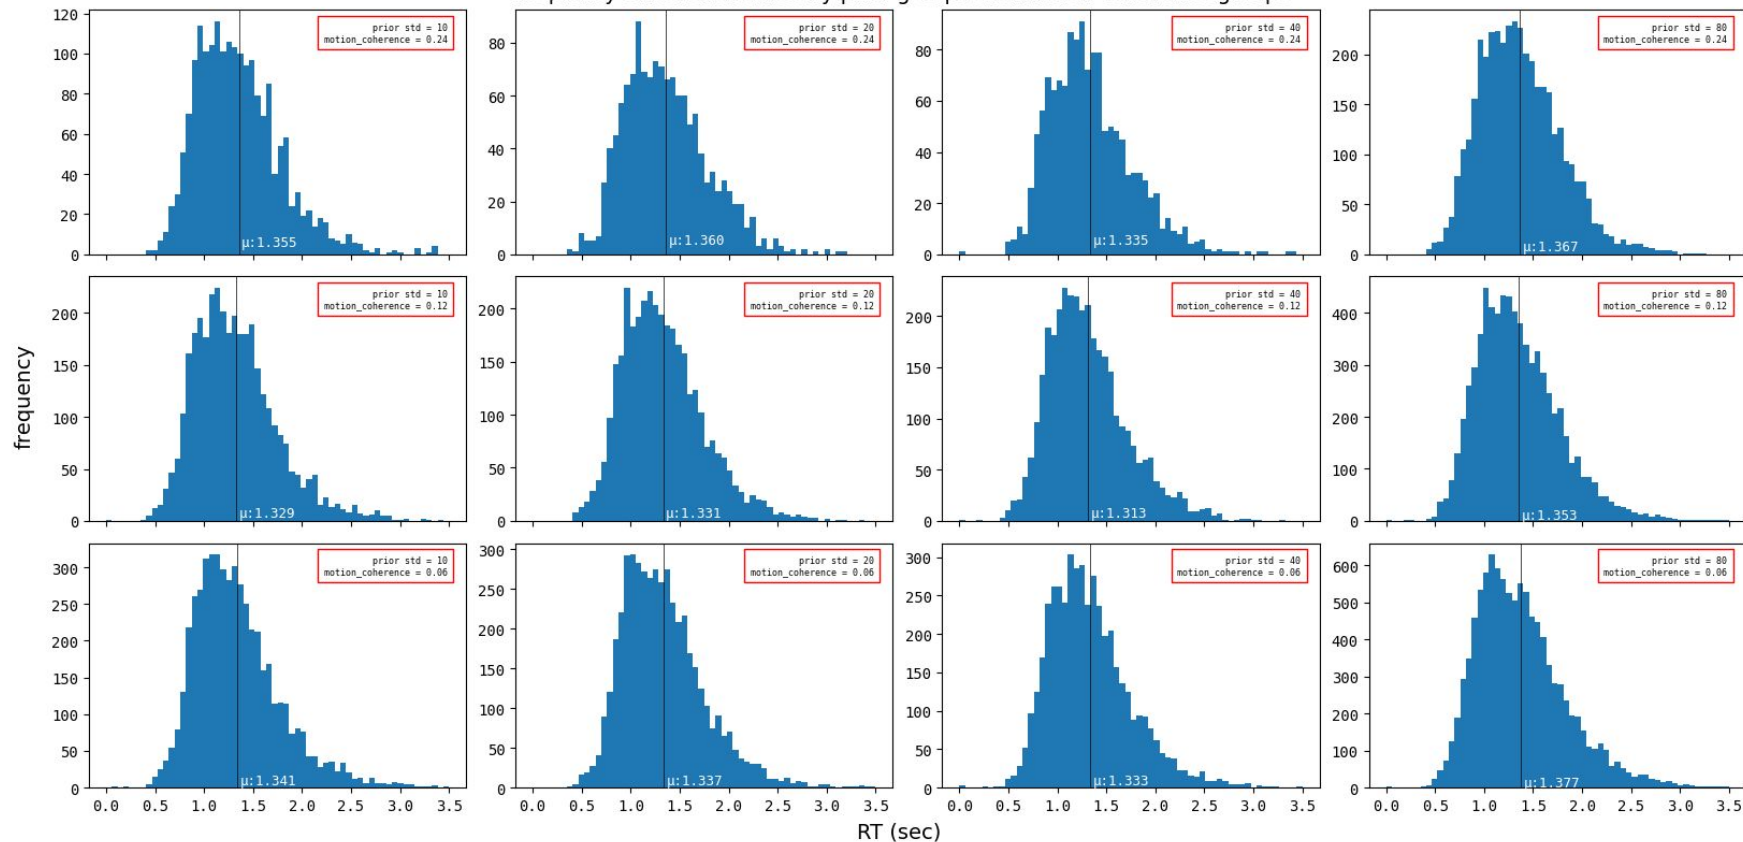

The Drift Diffusion Model (DDM)

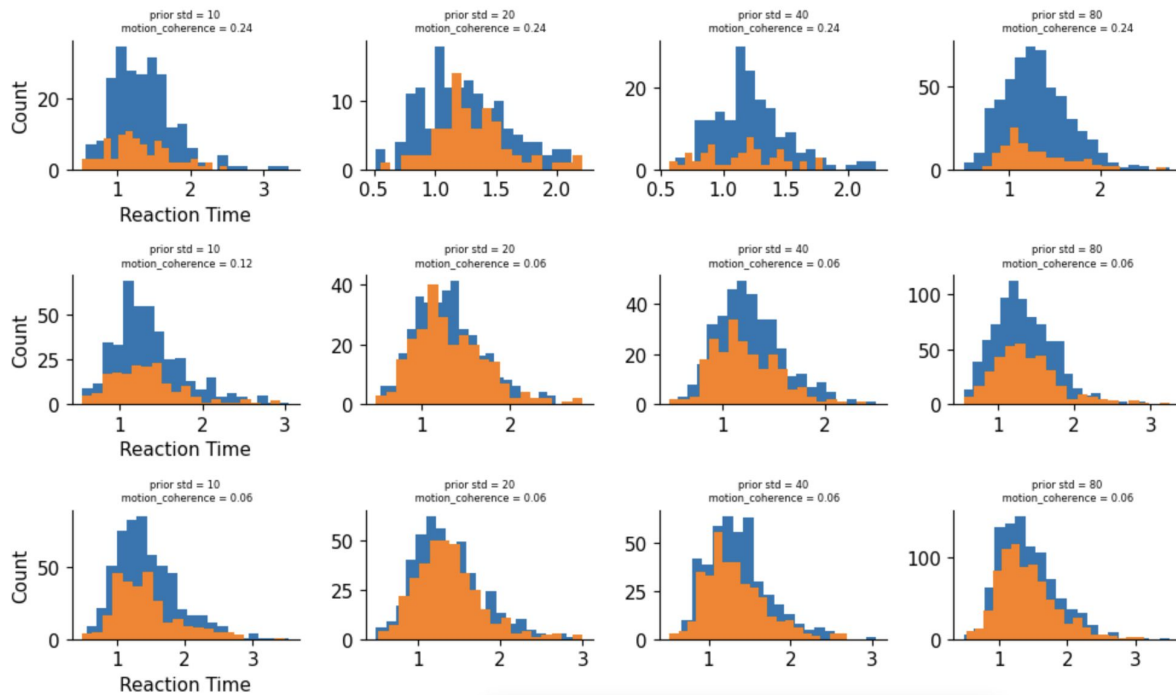

Reaction Time

Frequency of reaction times by prior groups and motion coherence groups

■ estimation closer to motion direction
■ estimation closer to prior mean
